

Movilitas Accelerator

Mobile Workforce Management with SAP Asset Manager

Move from Cost Center to Value Center

Maintenance departments are transforming from a pure cost center to one providing business value through access to real-time data and analyses that improve productivity and create new opportunities. One of the first steps is managing a growing workload with fewer resources under increasing quality requirements. Mobile workforce management provides a solution which helps companies plan, schedule and execute SAP maintenance activities more effectively using integrated resource planning and mobile solutions.

The following benefits can be achieved with the right processes and tools:

- Improve asset life and reliability by shortening work cycles while reducing overtime and cost of maintenance
- Empower your workforce and increase productivity by providing all necessary information at any place and any time whether online, offline, or occasionally connected
- Enforce and accelerate end-to-end business processes through capturing and validating data at point of performance

Moving from Complex to Simple with Integration

Mobile Workforce Management (WFM) projects are complex and require plenty of conceptual effort to cover all crucial processes. Furthermore, proper WFM consists of different solutions that range from resource planning and scheduling to mobile solutions which need to work in tandem. Starting such a project from scratch is difficult and expensive because long projects risk jeopardizing a profitable business case.

The solution? Our accelerator package for mobile workforce management offers a full set of preconfigured maintenance processes and functionalities for the manufacturing industry. It includes integrated resource planning and scheduling as well as the mobile solution for maintenance execution. The accelerator is based on best-practices and a proven implementation approach, which enables a faster project realization. The templated-based solution provides:

Faster time to value

A safe starting point for mobile workforce management

A good basis for a fit-gap analysis

Flexibility to make specific adjustments as your operations change

Movilitas Accelerator for Mobile Workforce Management Modules

The template includes the out-of-the-box configuration for corrective as well as preventive maintenance processes that stretch from resource planning and scheduling to the execution on the mobile device by the technician.

Resource Scheduling

- Overview of all work orders, resource availability, planned assignments of resources
- Gantt-based scheduling of maintenance tasks in a timely manner for single resources or teams
